

MOBILITY DENIAL SYSTEM

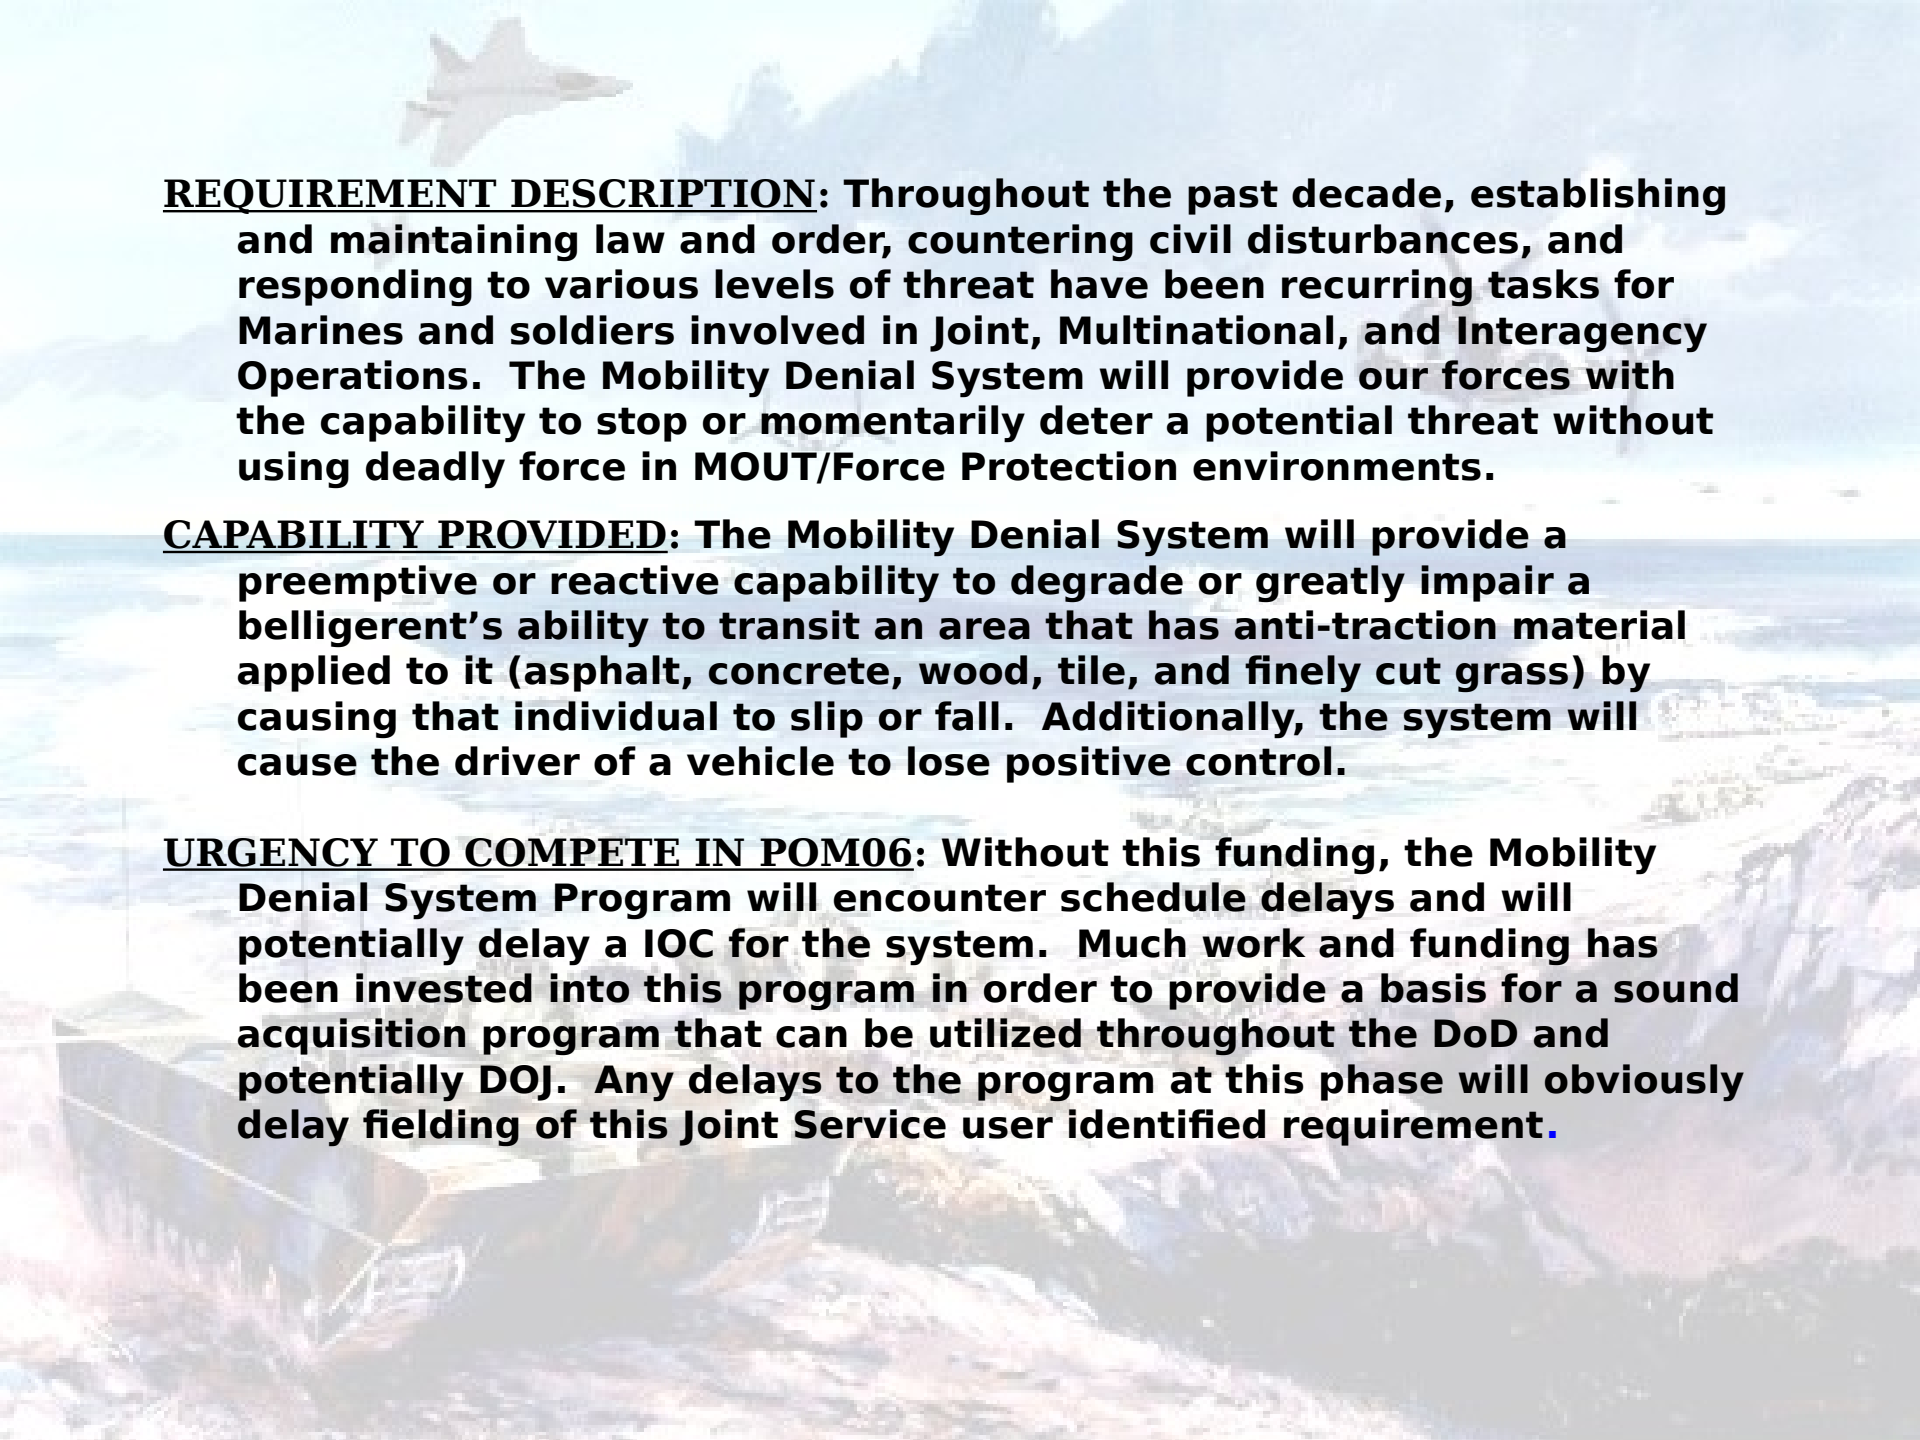

Briefed by

MAJ Keith Mayo

**POM-06 Command Element
Advocacy Board (CEAB)**

**Requirements Officer: Captain Noah Narut
Advocate Rep:**

REQUIREMENT DESCRIPTION: Throughout the past decade, establishing and maintaining law and order, countering civil disturbances, and responding to various levels of threat have been recurring tasks for Marines and soldiers involved in Joint, Multinational, and Interagency Operations. The Mobility Denial System will provide our forces with the capability to stop or momentarily deter a potential threat without using deadly force in MOUT/Force Protection environments.

CAPABILITY PROVIDED: The Mobility Denial System will provide a preemptive or reactive capability to degrade or greatly impair a belligerent's ability to transit an area that has anti-traction material applied to it (asphalt, concrete, wood, tile, and finely cut grass) by causing that individual to slip or fall. Additionally, the system will cause the driver of a vehicle to lose positive control.

URGENCY TO COMPETE IN POM06: Without this funding, the Mobility Denial System Program will encounter schedule delays and will potentially delay a IOC for the system. Much work and funding has been invested into this program in order to provide a basis for a sound acquisition program that can be utilized throughout the DoD and potentially DOJ. Any delays to the program at this phase will obviously delay fielding of this Joint Service user identified requirement.

STATUS OF REQUIREMENTS DOCUMENTATION (ICD, CCD, MNS ORD, SON):

ORD was signed in Feb 2002. CDD is being staffed for MS C.

AAO: The following number represent joint requirements:

USMC

62 Vehicle Portable Systems

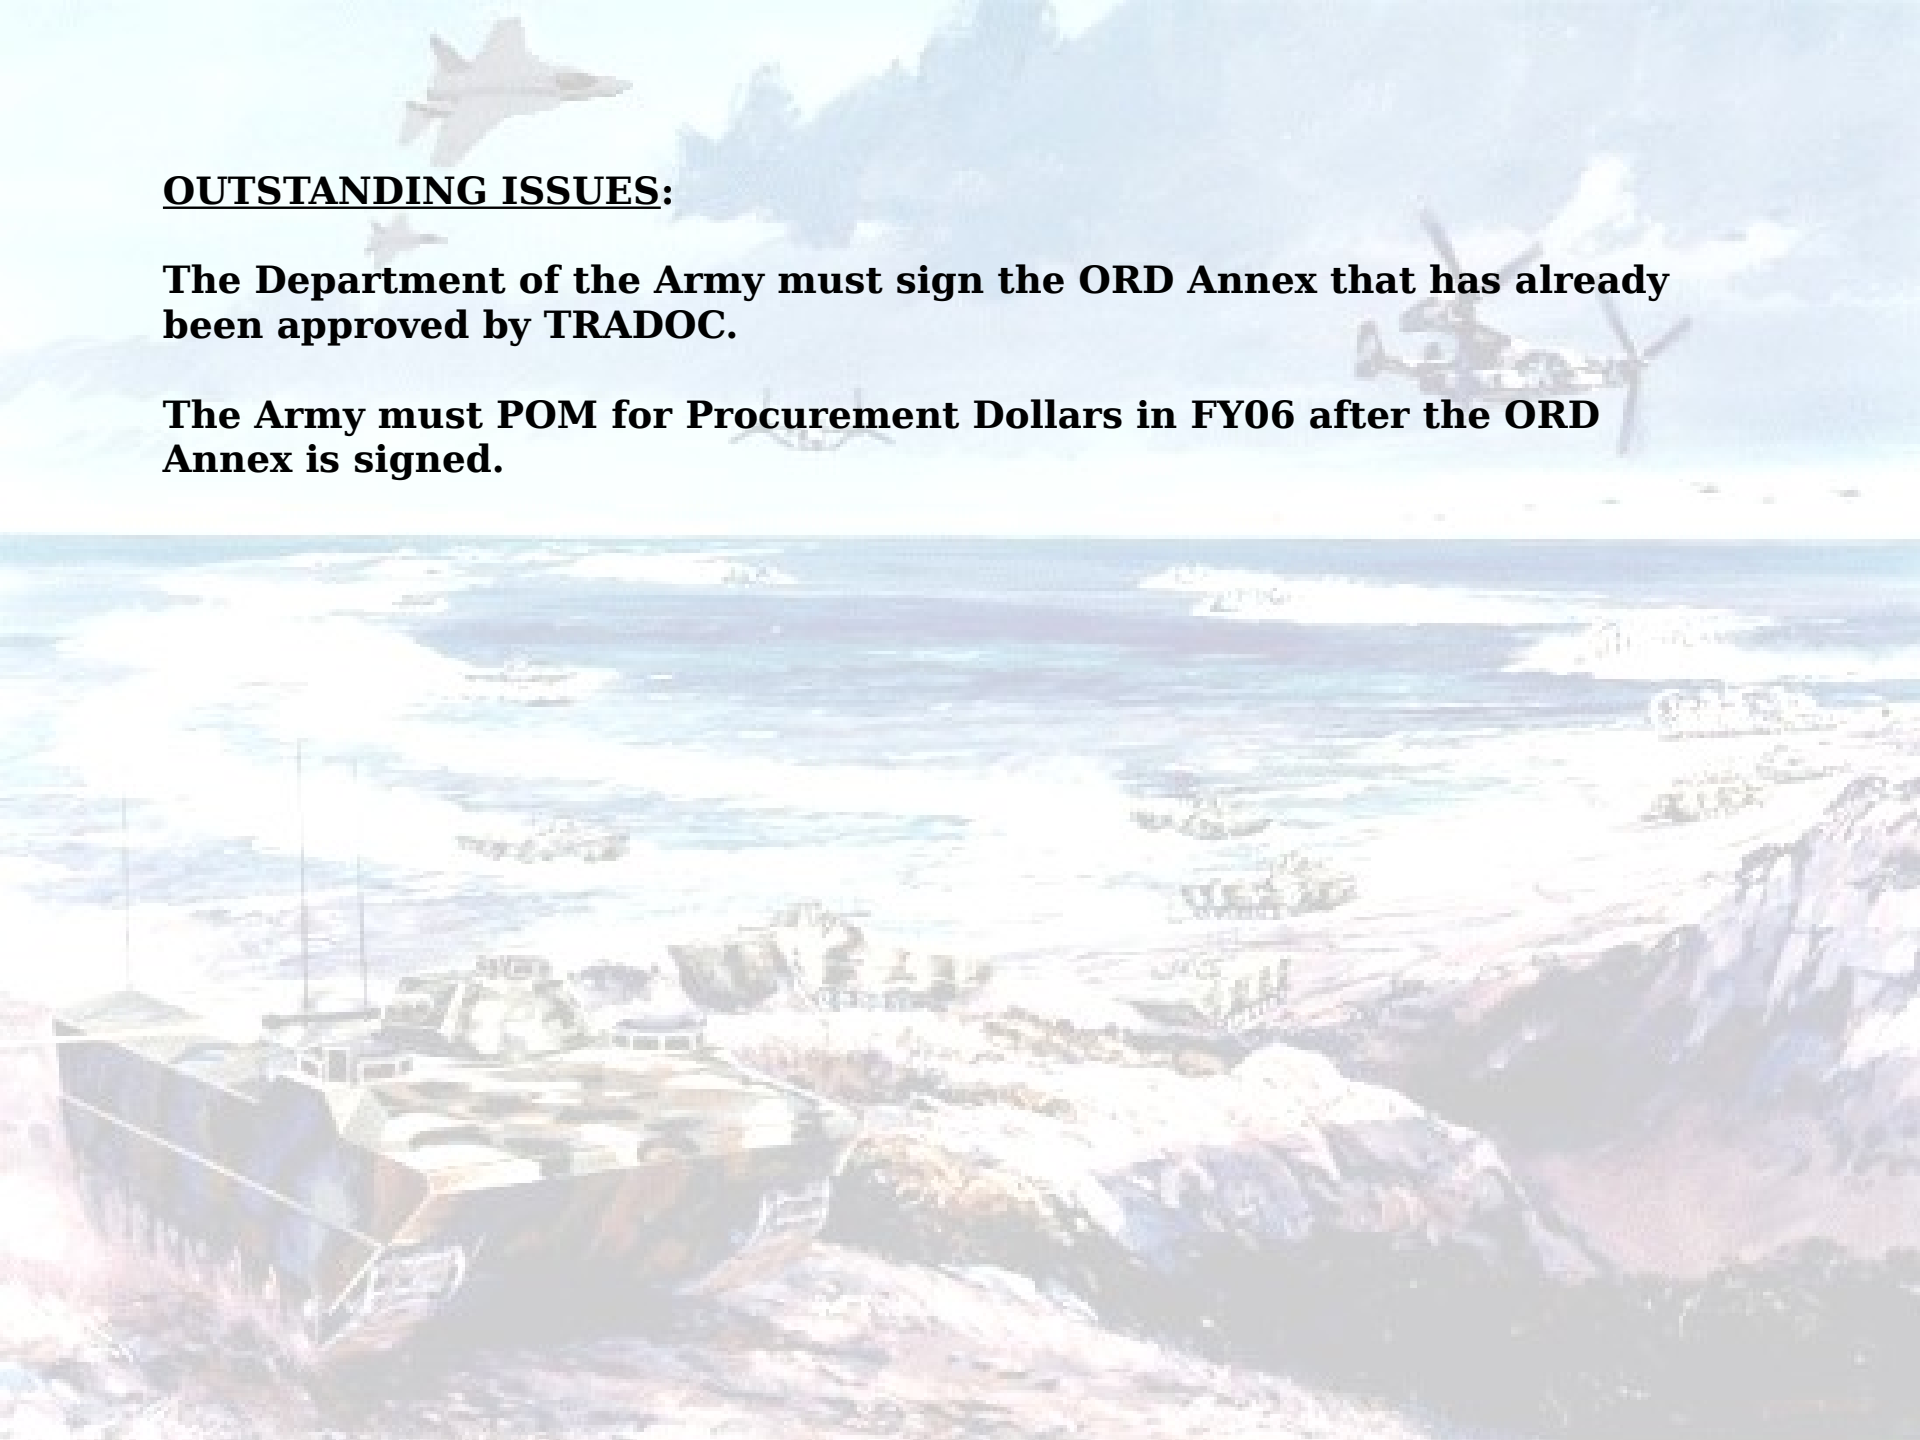

259 Man Portable Systems

US Army

50 Vehicle Portable Systems

415 Man Portable Systems

RELATED SYSTEMS: There are no similar systems in the DoD inventory.

The background of the slide is a composite image. The top half shows a blue sky with white clouds, featuring a fighter jet in the upper left and a transport aircraft in the upper right. The bottom half shows a large military ship, possibly an amphibious transport dock, at sea. The ship has a flat deck with various structures and antennas. The water is blue with white-capped waves. The ship is positioned in the lower left, moving towards the right.

OUTSTANDING ISSUES:

The Department of the Army must sign the ORD Annex that has already been approved by TRADOC.

The Army must POM for Procurement Dollars in FY06 after the ORD Annex is signed.
